About Me

Results-oriented Software Engineer passionate about solving complex real-world challenges through clean, maintainable, and high-quality code. I am dedicated to modern development best practices, with a strong focus on performance optimization and building scalable distributed systems. As an eager learner, I am motivated to grow within a high-standard engineering environment where I can contribute to innovative solutions while continuously expanding my technical expertise.

Skills

- Data structures and Algorithms
- C / C++ / Java / C#
- Javascript / Typescript
- MySql / PostgreSQL
- MongoDB / Redis
- Linux / Docker / Git
- Spring Ecosystem / microservices / J2EE / NodeJs
- React / Angular
- Software design / Data Modeling
- Artificial Intelligence Basics
- Agile / Scrum / Jira
- Communication / Teamwork

Certifications

MongoDB Associate Developer

Red Hat Linux Fundamentals (RH104)

LANGUAGES

Arabic: Native

French: Proficient

English: Proficient

EXPERIENCE

Full-Stack Developer | Theodo (Database Migration & Visualization)

the migration and redesign of a complex technical architecture, transitioning from a legacy Drupal setup to a modern Spring Boot and Angular stack. I was responsible for the cloud data migration, developing and executing migration scripts to move data from legacy AWS RDS instances and S3 buckets to the new environments. This work ensured a seamless transition and successfully reduced the time between a database change and its display on the front end from 6 hours to real-time (a hug performance gain) while decreasing back-office parameter update time by 83%.

Full-Stack Developer | Theodo (Cybersecurity Learning Platform)

Redesigned a cybersecurity learning platform for a major French client using a modern stack consisting of Next.js, Strapi (Headless CMS), and Tailwind CSS. I significantly improved the User Experience (UX) by designing high-quality interfaces and fluid animations, ensuring an optimized and immersive learning environment for the end users.

Full-Stack Developer | Theodo (Entrepreneurial Platform)

Developed new features and a regionalized user interface designed to enhance the experience for entrepreneurs across different sectors. I focused on improving AI prompt instructions within the platform, enabling users to more easily and accurately fill in their project information, leading to higher data quality and user satisfaction.

Full-Stack Developer Intern @ NTT DATA

I built an automated certificate system using Angular and Spring Boot to replace a slow manual process. Before, staff had to manually collect data, fill out forms, and wait for manager signatures, which took a lot of time. I created a solution that automates everything, allowing the team to generate certificates for successful candidates with just one click. This change cut processing time by 75% and made the whole operation much more efficient.

EDUCATION

State Engineer Diploma in Software and Distributed Information Systems

Ecole Normale Supérieure de l'Enseignement Technique de Mohammedia 2022-2025

Diploma in Scientific and Technical University Studies in Mathematics-Computer Science-Physics-Chemistry - with honors

Faculty of Sciences and Techniques of Tangier 2020-2022

EXTRACURRICULAR ACTIVITIES

- Third Prize Winner at Ideathon ENSET Mohammedia: Led a team in conceptualizing an innovative idea and developing a prototype. Demonstrated strong ideation, rapid prototyping, and presentation skills in a competitive environment
- Organizer, GEIW-2023 Hackathon: Managed the planning and execution of a competitive hackathon focused on Artificial Intelligence and Blockchain technology.
- Tournament Organizer, Chess Championship: Coordinated logistics and registration for a campus-wide chess tournament to promote strategic thinking and student engagement.
